Possible Case of Pesticide Poisoning: Late this afternoon we learned about a possible situation of pesticide poisoning of a family while on vacation in St. John, US Virgin Islands. They may have been exposed during a stay at a vacation condo. The parents and two teenage boys are in the hospital, with one of the boys in serious condition. The agencies in the US Virgin Islands were not aware so we informed them this afternoon along with ATSDR. We are sending an OSC from Puerto Rico to the site tomorrow and will begin sampling. I will be on St. John for meetings on Monday and may stop by. I have spoken to a family friend who is advocating for the family while they are hospitalized. We don't know for certain that this is a pesticide poisoning case but we should know more in the days ahead. We are mobilizing tomorrow to gather information and to ensure that others in the condo complex are not impacted.
